The screenshot shows the eMule v0.48a interface. The top toolbar includes buttons for Disconn..., Kad, Servers, Transfers, Search, Shared..., Messages, IRC, and Statistics. Below the toolbar, there are search filters for Name (spinellis), Type (Any), and Method (Global (Servers)). The search results table is as follows:

### Palindromic Palindrome Checking

Stan Kelly-Boole's column in the April 2007 [ACM Queue](#), titled [Ode or Code? — Programmers Be Mused!](#), was as always very enjoyable. However, I found its ending, a C function that returns true when given a palindromic string (e.g. ABCBCBA), anticlimactic. The function given is recursive; I was expecting it to be palindromic. How difficult can it be to write such a function?

### Decyphering Modern Texts

One would think that the decyphering of old writings would be the domain of archeologists poring over ancient [palimpsests](#). It turns out that, thanks to modern technology, the quality of documents written only a decade ago can decay to the point of requiring decyphering. And don't get me started on the problems of [digital preservation](#) and the [decay of URLs](#).

### Using the Open-Sourced Java Platform

Having access to a system's source code is liberating. I've felt this since I first laid my eyes on the source code of the 9th Edition Unix in 1988, and I saw this again as I used the freshly [open-sourced Java platform](#) to implement a [UMLGraph](#) feature that has been bugging me for more than a month.

### Of Wine and Software

Today, following the yearly [IEEE Software](#) board meeting, we visited the Casa Valduga winery near Bento Gonçalves at Rio Grande do Sul. The guide told us that the winery nowadays made all its wine in stainless steel vats, which have largely replaced the traditional oak barrels.
